

CAREER & TECHNICAL EXPANSION

CONSTRUCTION AND RENOVATION PROGRESS

CMU wall construction is progressing well and crews are actively working in Areas B and C. Underground plumbing and MEP rough-in installations continue throughout the building. In addition, installation of the mezzanine steel structure has begun.

Site work is also advancing, with the main entry road now paved and storm sewer installation around the detention basin continuing. Crews are completing the future building pads and the west service road, while topsoil has been spread and seeded in completed areas. A new sidewalk has also been installed, providing a connection between the new roadway and the existing college campus.
